

Selectrol®

First Generation Micro-organisms

TCS Biosciences Ltd and the Health Protection Agency agree Manufacturing License

We are delighted to announce our collaboration with the Health Protection Agency Culture Collections. The HPACC and TCS Biosciences Ltd have agreed a Manufacturing License with the result that Selectrol® will continue to be manufactured exclusively from NCTC and NCPF source strains.

This collaboration reinforces the quality of the Selectrol® range of micro-organisms while ensuring all the benefits of first generation cultures.

As part of the Manufacturing License the HPA will independently test Selectrol® strains to ensure product integrity and further assure the quality of the Selectrol® range.

Selectrol® Micro-organisms are:

- Manufactured under license from the HPA.
- Guaranteed first generation derivatives of the original vial of NCTC or NCPF source strain.
- Ideal for a variety of quality control and testing applications.
- Ideal for meeting the requirements of accredited laboratories.
- Economical.
